

5.4 Accessibility

As you study this section, answer the following questions:

- What types of disabilities does the accessibility option support?
- Which accessibility option can be set to assist users who have trouble pressing multiple keys at the same time?
- What feature can you use to compensate for a user who has Parkinson's disease and accidentally presses a single key multiple times?
- What accessibility options are available for the visually impaired user?
- Which types of alternative input methods are available?

In this section, you will learn to:

- Configure the Universal Access (Assistive Technologies) options for people with impairments, including:
 - Sight options
 - Hearing options
 - Typing options
 - Pointing & Clicking options

Key terms for this section include the following:

Term	Definition
Assistive technologies	Assistive Technologies allow people with tactile, audible, and visual impairments to use Linux systems by changing how the user interacts with the computer including such things as sight, hearing, typing, and mouse options.

This section helps you prepare for the following certification exam objectives:

Exam	Objective
CompTIA Linux+	2.8 Compare and contrast Linux graphical user interfaces. <ul style="list-style-type: none">• Accessibility
