7.3 Group Management

As you study this section, answer the following questions:

- Which **usermod** option changes the secondary group membership?
- Which command removes all secondary group memberships for specific user accounts?
- How can you display the primary and secondary group membership for a single user?
- Which **groupmod** option changes the group's name?

In this section, you will learn to:

- Rename and create groups.
- Add users to a group.
- Add a user to additional groups.
- Delete groups and users.
- Remove a user from a group.
- Remove a user from all groups.

Key terms for this section include the following:

Term	Definition
Group	A collection of users which can be used to help manage users, such as assigning and revoking permissions to files and directories.
